Abstract (en)

[origin: ES8700208A1] A yarn storage and delivery arrangement, particularly for textile machines, has a storage drum (4) that has a number of elongated yarn support elements (12) arranged evenly around the circumference at equal radial distances from the drum axis and having yarn storage contact sections (13) to store several loops or turns of a storage winding. To achieve a simple, low-inertia design of the storage drum, the yarn support elements (12) are formed by U or L-shaped narrow bails or wire elements fastened at least at one end to the drum body (5) and guided at the other end by the drum body or a part connected thereto.
