Abstract (en)

[origin: EP0177868A2] In a height-adjustable support leg, particularly for machine tools - of the type comprising two elements slidable telescopically one into the other and locking means for fixing said elements in their mutual position -, each of the two telescopically slidable elements is of complex cross-sectional profile, comprising at least two flat sides converging towards the inside of the leg, with said flat sides there cooperating, from opposing directions, pairs of equally convergent faces, parallel to said sides, of two clamping plates forming said locking means.
