Abstract (en)

A method of realizing, by a printing system, in particular a screen printing system, an image on a substrate, with application adjacent to the already printed image of at least one image-integrating material caused to adhere to a surface complementary to the already printed image. One predetermined non-printed areas of the substrate there is spread preferably by means of a screen printing screen embodied as a stereotype of such areas, a layer of adhesive for fixing the image-integrating material. The image-integrating material is preferably a very fine metal foil, as for example gold foil, tombac foil, silver foil and various metal alloy foils.
