Abstract (en)
1. Dismountable flooring comprising filler plates (2) cooperating with link components (4), each link component including a central cutout (15) whose thickness is substantially equal to one-half of the total thickness (E) of the flooring (1), and whose length (la) is substantially equal to the width (l) of the link components (4), said link components being intended to be interfitted in pairs with their central cutouts (15) receiving each other to form crosses having centers (0) and between whose arms the filler plates (2) are received, characterized in that each link component (4) further includes two end cutouts (20), said end cutouts being disposed on all the length of the link component (4), at respective ends thereof, in alternating manner on opposite faces, and being of dimensions such that the end cutout of one link component is suitable for end-to-end interfitting engagement with the end cutout of an adjacent link component.

Abstract (fr)
L'invention concerne un plancher démontable. Un tel plancher est constitué d'un assemblage de plaques de remplissage (2), qui s'encastrent dans les bras d'une pluralité de croix de centre (0) formées chacune de deux éléments de liaison (4) dont la caractéristique est de comporter une découpe centrale (15) et deux découpes d'extrémités (20). L'invention s'applique à la mise en place de planchers pouvant être démontés dans tous les lieux et pour tous les usages tels que gymnases, salles polyvalentes, elle s'applique à tout élément de sol en général.
