Abstract (en)
[origin: EP0178510A2] 1. Artificial reef for sanding coasts, which is assembled transverse to the main direction of current beneath the water surface (2) from prefabricated components (1) with a triangular cross-sectional profile, of which one profile edge (8) is directed upwardly, characterized in that the upper profile edge (8) is sharp-edged and the surfaces falling away therefrom are fluted, the flute (9) on the front side facing the open water merging below into a contour of convex curvature (10), on which there is a profile edge forming a support foot (12).
