Abstract (en)

[origin: EP0178595A1] 1. A dismountable holding device for lamps in a headlight where the lamp is provided with an insertion collar (3) having fitting elements bent at an angle for positioning the lamp in an opening (2) in the reflector (1) of the headlamp, characterized in that the device comprised a resilient clamp (7) which is provided with substantially rigid ends (6) directed at right angles to the axis of the lamp, whereby one clamp end (6) is held between at least one inclined surface of a notch (5) on the reflector (1) and the insertion collar (3) of the lamp by a wedging or clamping action, or the relevant inclined surfaces of a notch (5) are situated on the insertion collar (3).
