Abstract (en)

[origin: EP0178644A1] Method for the preparation of a weaving warp or warp section (18) formed by monofilament thermoplastic synthetic yarns, characterized by the use of a spinning head (5) providing continuously the number of yarns required to form the warp, by the direct use of the bundle of so obtained yarns in the subsequent warping process and also by the use of a yarn accumulation and recovery device (12) in order to avoid the need for stopping the spinning process at a beam change.
