Abstract (en)

[origin: EP0178979A1] 1. Method for obtaining and filling a large-capacity flexible container (1) in which, in a first stage, two rectangular panels of cloth (2) are sewn together along their long sides arranged vertically, in a second stage a first bunch (6) is formed in the lower part of the said two panels of cloth (2) and this bunch (6) is ligatured by a tie (7), the said first two stages being carried out before filling, in a third stage a second bunch (9) is formed in the upper part which is ligatured by a tie (12), characterized in that the second bunch (9) is produced before filling, in that a single lateral aperture (13) is provided in the wall of the container (1) between the two bunches (6, 9) in the vicinity of the upper part, in that a filling spout (14) is introduced into the aperture (13), in that filling is carried out, and in that the spout (14) is withdrawn and the aperture (13) is closed.
