Abstract (en)

[origin: EP0179005A1] 1. A packaging for products presented in grouped lots, consisting of individual pots (1) each of which is closed by a cover (3), that are inserted into and joined together by a grid (13) presenting a number of holes (14) equal to that of the pots in each cluster, characterized in that the cover of each pot comprises in turn a contact area (8) at the top of the upper flange (4) of the pot, and a skirt (7) which possesses firstly, an annular internal shoulder (9) co-operating with an external shoulder (6) of that flange, and secondly two diametrically opposed tabs (10) each of which is an extension of a tearable zone (12) of that skirt, and in that the grid (13) comprises, concentrically with the hole (14) that serves to accommodate a pot (1), two circular arc cut-outs (17) so dimensioned to permit the passage of the two tabs of each pot cover and each of which is prolonged by a seating arranged below the grid and into which the tab (10) penetrates due to the elastic deformation of a retaining unit (19) that forms a portion of the grid, but from which it can only be extracted by breaking the retaining unit.
