Abstract (en)
[origin: EP0179182A2] The packaging container is made of cardboard or similar material, in particular a box which is made from blanks by folding and/or gluing and is rectangular in the base surface and in cross-section. It has a bottom part (2), provided for storing and removing individual parts, and a top part (3) which can be placed on top of the bottom part (2) and close the latter. The top part has wall regions which can be opened out around a fold (17), acting as a hinge, on the top side of the top part (3) and expose an access opening to the bottom part (2). Guide tabs as side wall portions (20), beginning at the fold (17) and continuing from the longitudinal edges of the wall (14) ending at the fold, are constructed on the wall (14) forming the top side and closing the access opening at the top. Said guide tabs are bent perpendicular to the top side in the direction towards the bottom part (2) and are preferably of arcuate construction at their edge located opposite the fold (17) in such a way that there is swivellability inside the top part (3). <IMAGE>
