Abstract (en)

[origin: EP0179189A2] The individual liquid components come from two piezometric tanks (1, 2), merge by flowing through two axial orifices (3, 4) and mix in a pump (5) with constant delivery. The more viscous liquid (syrup) flows through the inner orifice (3) of the two coaxial orifices (3, 4), and the control of the flow rate thereof simultaneously also adjusts to the flow rate of the less viscous liquid (water). <IMAGE>
