Abstract (en)  
[origin: EP0179388A2] The portable package is made of a single-piece blank made of foldable material and has an essentially cuboid lower box construction which is open at the top for the insertion and removal of articles, in particular bottles, and which is extended at the top to form a carrying construction which has a carrying web (17, 21, 22) which extends essentially centrally between the longitudinal side walls (2) and parallel to the latter and which has a grip opening (14, 15) approximately in its centre. Covering areas (19) are attached at right angles on free edges (6) of extension areas (20), which covering areas are integrally connected to the portion situated there of their longitudinal side walls (2) and extend the latter upwards. Further covering areas (18), which are connected in each case to the carrying web (17, 21, 22), are attached at right angles on the free edges of the covering areas (19) in each case. <IMAGE>
