Abstract (en)

[origin: EP0179480A2] Scaffold-supporting structure having a plurality of such structures and boards or the like, carried by them and capable of being walked on, for bridging a walkway or similar accessible area between a wall and a step, parapet or the like, in particular of an access balcony of residential buildings, the different dwellings of which can be reached from a central staircase only via such access balconies. In order to bridge newly renovated accessible areas of the type in question, the supporting structure is provided with a web crossbeam, approximately horizontal in the use position, at one end of which a fastening flange is attached and the other end of which is connected to an approximately vertically rising supporting crossbeam, on which is arranged a bearing crossbeam which projects approximately horizontally in the opposite direction to the web crossbeam.
