Abstract (en)

[origin: EP0180041A2] 1. One-piece blank of foldable material for a dividable tray, comprising a bottom (1) with hingedly connected end walls and side walls (2, 3) on respectively opposing sides, each of said side walls (3) carry on their longitudinal edge (4) facing away from the bottom (1) an apertured top wall (5) with apertures (6) for safely receiving containers or the like, said top wall (5) is of a width corresponding to approximately half the width of the bottom and comprises in the area of its longitudinal edge facing away from the side wall (3) lid-support flaps (7) foldable about at 90°, whilst a tear strip (10) is provided centrally in each end wall (2), both tear strips (10) being in alignment with each other and with a cross-sectional weakening extending along the center line of the bottom (1), characterized in that said tear strips (10) change over into a bottom longitudinal slot (11) forming said cross-sectional weakening, two fastening strips (12) for said lid-support flaps (7) are struck out of said longitudinal slot (11) and are upwardly bendable over at 90° in opposite directions, the height of said lid-support flaps (7) approximately corresponds to that of the side walls (3).
