Abstract (en)
[origin: EP0180245A2] 1. A eaves-ventilation element (1) for ventilating and sealing the interstices between the substructure of a roof in the area of the eaves and the underside of the roofing panels (8) above it, comprising a ventilation strip (4, 23) including aeration apertures (7, 24), which ventilation strip being set against the roofing panels, and a strip-like covering plate lying on the roof substructure, which covering plate's edge on the eave's side lying in the eave's gutter, characterized by constructing the eave's side of the edge of the covering plate (2) as a separate compensating strip (3) to compensate for the eave's gutter grade, which separate compensating strip being connected to the covering plate by means of an angularly adjustable hinge (11, 12).
