Abstract (en)
[origin: EP0180341A2] A shipping package comprising an exterior carton (12) having a rectangular bottom (22), sides (24) and top closure (26) defining an interior space. A bottom panel (16), a top panel (14), and usually at least one divider panel (18) are mounted within the interior space dividing the same into a plurality of tiered spaces. The construction of the panels is such that each tiered space is defined along its lower surface by an upwardly facing corrugated sheet and along its upper surface by a downwardly facing corrugated sheet. A plurality of coiled fastener packages (20) are mounted within each tiered space so that the fastener head defining end (44) thereof engages one of the corrugated sheets defining the same so as to collapse the engage corrugations thereof and the fastener point defining end (42) thereof engages the other of the corrugated sheets defining the same so as to penetrate the engaged corrugations thereof.
