Abstract (en)
A button is disclosed, which comprises the main body 2 of a button being provided with a cavity 9; a leg body 3 which has an inserting part 13 at the upper end of a basal part through which passes an inner hole 11 extending from the lower end, and which is formed at said basal part with a meshing part 24; and a fastening body 4 being formed at its side face with a pawing part 23 which engages with said meshing part 24 and being provided erectly at its base piece with an axial rod which is to be inserted into said inner hole; wherein said main body of the button and said leg body both are made to be fixed firmly on each other by putting said inserting part 13 adherently into said cavity 9; whereby the fitting operation of buttons is able to be done easily and quickly at a touch.
