Abstract (en)

[origin: EP0180546A2] A tear-off membrane-like cover (5) has been connected to the bead (3) of a can body (1) along a circular region (d). The latter has been bent downwards after the membrane-like cover (5) was sealed on and now no longer lies in the plane of the cover (5). The region (d) of the membrane-like cover (5) can be detached from the can body (1) in the manner of a tape by means of an asymmetric tab (31) and the opening of the can can thereby be exposed. <IMAGE>
