Abstract (en)

[origin: US4582316A] A device for withdrawing printed sheets from a delivery of a sheet-fed rotary printing machine for examination and sorting purposes, the delivery being a chain delivery with gripper rows attached to the chain and having grippers operable by cam control, withdrawal of the printed sheets being initiated by a delayed opening of the respective grippers, includes a first gripper-opening cam, means for releasing the first gripper-opening cam from a locked position thereof so that it is engageable with a rotating control cam for bringing the first gripper-opening cam into a position wherein opening of the grippers is effected and is prevented, a second gripper-opening cam for initiating a delayed opening of the grippers, the second gripper-opening cam being disposed downstream from the first gripper-opening cam in travel direction of the printed sheets, and means for feeding the printed sheets released from the grippers, when the grippers are opened, directly to a conveyance device for further transporting the printed sheets.

Abstract (de)

Die Erfindung bezieht sich auf eine Vorrichtung zur Entnahme von bedruckten Bogen für deren Begutachtung oder Aussonderung aus dem Ausleger einer Bogenrotationsdruckmaschine mit einer als Scheibe ausgebildeten Greiferöffnungskurve (37), die die Entnahme eines Bogens einleitet. Zur Entnahme eines Probefogens wird die Greiferöffnungskurve (37) mit einer Verschwenkeinrichtung (39-42,47) verschwenkt, wodurch der Bogen verzögert freigegeben und in einem Führungskanal (44) nach außen befördert wird.
