Abstract (en)
[origin: WO8505229A1] The connector is comprised of at least two supports (1, 2) made of insulating material of which at least one is made of elastic plastic material and which are assembled together inner face against inner face. The profiles of said supports (1, 2) are such that once thus assembled, they delimit between each other a series of troughs (4) opened on at least one of the transverse faces of the assembly (7) of both supports. The inner face of at least one of said supports is coated with at least one metal track at each trough (4) location.
