Abstract (en)

1. Gun mount for armoured objects for carrying hand firearms, which enables firing outwardly from the ballistically protected inner area (4) of the object, a carrier (2) being provided linking the inner area (4) with the outer area and at least surrounding part of the barrel (41), said carrier having an internal bore, the diameter over the entire length thereof being greater than the external diameter of the barrel (41), the weapon housing of the hand firearm being connected with the carrier (2) by an internally positioned, releasable coupling, in such a way that no direct connection exists between the barrel (41) extending from the weapon housing and the carrier (2) and that at no point does the barrel (41) come into contact with the carrier (2) as a result of oscillations of the weapon barrel which occur with firing.

Abstract (de)

Die Erfindung betrifft eine Lafette mit Kugelkörper (1), bei welcher zur Verbesserung des Trefferbildes durch eine erfindungsgemäße Kupplung (15, 23) der Lauf (41) mit radialem Abstand (42) zur Aufnahme (2) angeordnet ist, so daß dieser beim Schießen auch radial frei in der Öffnung (3) der Lafette schwingen kann.
