Abstract (en)

There is disclosed a reflective photographic material having photosensitive emulsion layers applied on at least one side of a support film of thermoplastic resin essentially comprised of polyester resin that contains white pigment containing 90% by weight or more of surface-treated titanium oxide having an average particle size of 0.1  $\mu\text{m}$  to 0.5  $\mu\text{m}$  and including substantially no particles whose size is 50  $\mu\text{m}$  or more. The disclosed photographic material shows excellent whiteness, opacity, gloss and resolving power. A permeation of a photographic processing liquid through the cut edge of the support of said photographic material does not take place.
