Abstract (en)
1. Water sport apparatus comprising a water container (1) with a rising bottom surface (2), a closable delivery flow nozzle (3) along the lower edge of the bottom surface (2) from which the water is passed upwardly over the rising bottom surface (2) in a rushing flow, a return flow conduit (4) which carries the water flowing over the upper edge (8) of the bottom surface (2) back to the delivery flow nozzle (3) again and whose entrance is covered by a gate (14), a high-level container (5) which is arranged above the delivery flow nozzle (3), to accommodate the amount of water required for the starting operation, and a circulating pump (6) in the return flow conduit (4), characterised in that connected to the water container (1) at the side thereof which is opposite to the high-level container (5) is an additional pool (7), the capacity of which corresponds at least to the filling volume of the high-level container (5), wherein the upper edge (8) of the rising bottom surface (2) forms an overflow into the additional pool (7), from which the return flow conduit (4) starts.
