Abstract (en)

[origin: EP0183178A2] 1. Means for introducing a liquid into bores in brickwork, walls, wooden beams or the like, more especially as a horizontal barrier in the brickwork against rising damp, with a pressure-generating means and a distributor system which is connected to the latter and to which are connected a plurality of injection nozzles which can be inserted into the bores for the simultaneous supply to several bores, characterised in that the pressure-generating means consists of a supply canister (2) for the liquid (21) to be introduced and a special sealing or closure cap (22) with a riser pipe (23) and a pressure or delivery pipe (24) provided with a hand bellows (25), which special sealing cap (22) can be screwed on to the supply canister (2) in place of a normal sealing cap for delivery and transporting purposes.
