Abstract (en)
A display system is disclosed which is capable of executing its main job processings speedily when it performs a cursor display. The display system includes therein a cursor pattern register (24) for storing the pattern of a given cursor, display position specifying means (24) for specifying a position where the cursor is to be displayed, and cursor displacement means (10b,10d) for displacing the cursor relatively to a display means (40). The display system may also contain cursor clip means, logic operation means (30), shift clock control means and bit shift means (25).
