Abstract (en)
[origin: WO8600012A1] The eyeshield comprises a strip of coloured, semi-rigid transparent film (10) formed to provide a central eyeshielding portion (11), a nose piece (12) and a pair of wings (14) extending on either side of the eyeshielding portion. Each of the wings (14) is resiliently movable relative to the eyeshielding portion (11) by virtue of a plurality of substantially parallel crimps (13) which enable the effective length of the wings (14) to be adjusted such that the eyeshielding may be worn by persons having differing head sizes. At the of each wing (14) is provided an ear engaging loop (15) adapted to loop over an ear of the person wearing the eyeshield, the loop being formed with a piece of resilient foam material (17). Along an upper rear edge of the eyeshielding portion (11), a strip of resilient foam (18) is provided to space the eyeshielding portion (11) from the forehead of a wearer to prevent discomfort due to rubbing of the edge of the strip against the forehead and to adequately space the strip from the eyes and eyelashes.
