Abstract (en)

[origin: EP0183884A1] 1. A priming composition with an elevated thermal stability at a temperature about 100 degrees C, sensitive to percussion for generate a shock wave likely to prime directly the charge of a projectile, comprising a primary explosive and a sensitivity additive, wherein it comprises 40 to 95 weight percent of an explosive having a tetrazole part, the additive being represented by 2,5 to 40 weight percent of an oxidising agent and 2,5 to 40 weight percent of a reducing agent.
