Abstract (en)
[origin: EP0183943A2] The supporting and closing element has a housing with at least one recess and with at least one holding magnet for a container, in particular a tube-shaped container which has an opening and, if appropriate, a threaded piece at its one end and is tightened with the aid of a metallic supporting part of the holding magnet which can be attached near to its container opening, the supporting part and the holding magnet having mutually adapted surfaces. In order to provide a usable element of this type, the holding magnet has a truncated cone-shaped magnet surface and/or the element is freely movable or its housing is mounted on a bearer. <IMAGE>
