Abstract (en)
[origin: EP0184141A2] The radiator connection element, with a radiator plug and a radiator connection nut, is characterised in that the radiator plug has, extending into the radiator, a sleeve with a bore which can receive the radiator connection nut completely or except for an excess of 2 mm, and in that the sleeve end which extends into the radiator is connected to a corrugated pipe which at its free end holds the radiator connection nut extractably from the radiator plug in such a manner that space is created for larger valves or additional vent valves, shut-offs, heat sensors or the like. <IMAGE>
