Abstract (en)
[origin: US4658678A] In order to constructionally simplify a cork screw having a bell-shaped housing with which a cork can be lifted out of the bottle neck without reversing the turning direction of the cork-screw blade, the cork-screw blade projects in a known manner with one of its ends out of the closed end of the bell-shaped housing and is firmly connected to a tommy handle. A telescopic tube is arranged between the bell-shaped housing and the tommy handle and encompasses a section of the cork-screw blade, said telescopic tube being firmly connected with one of its ends to the bell-shaped housing and with its other end to the tommy handle.
