Abstract (en)

[origin: EP0185009A2] 1. An internal combustion engine comprising a sound-insulating capsule, which encloses the engine and defines a space for collecting lubricating oil, characterized in that at least portions of the capsule wall constitute a heat accumulator owing to the provision of heat-accumulating material (5), which has been applied to the inside surface of the capsule wall and is contacted by splashed oil, and constitute a heat exchanger because their surface area has been increased (6).
