Abstract (en)

[origin: US4714222A] The present invention is directed to a bracket structure which has one or more tubular members interconnected by elbow members. At least one of the tubular members is connected to an elbow member by a plug-type connection having a socket receiving a pin part with the socket and pin part being constructed so that no twisting will occur between the two parts in the assembled position but the two parts can be disassembled and reassembled with the position of the parts being rotated through at least 180 DEG relative to each other. This provides the advantage of enabling easy changing of the bracket from being adapted for a floor mounting to a ceiling mounting.

Abstract (de)

Die Erfindung betrifft eine aus einem oder mehreren Tragrohren und Rohrbogen zusammengesetzte Tragarmkonstruktion. Erfindungsgemäß weisen Tragrohr (2 bis 4) und Bogen (5 bis 8) ein zueinander passendes Steckprofil auf. Das Profil ist derart ausgebildet, daß ein drehfestes Verbinden der Teile (5; 3; 3; 6; 7; 4; 4, 8) in wenigstens um 180° zueinander versetzten Stellungen ermöglicht ist. Vorteilhafterweise enthält das Profil vier am Umfang gleichmäßig verteilt angeordnete, durch Vorsprünge (11) und Vertiefungen (12) gebildete, längs verlaufende Stege und Nuten.
