Abstract (en)
[origin: EP0185291A2] 1. A setting device for a timepiece having a mechanical or electromechanical clockwork, for measuring time intervals indicated in analogue representation, the time intervals being adjustable by means of setting element on a dial (3) provided on the front panel (26) of the casing of the timepiece, characterized in that the setting device includes an adjusting disk (4) with a pointer (5) integrally formed therewith in radial direction, with the adjusting disk (4) being rotatably mounted within the boundaries of the annular dial (3) and being driven about its shaft (7) by the clockwork, and that an annular transparent cover glass (8) is provided on the front panel (26) of the casing of the timepiece in such a manner that the outside surface of the cover glass (8) is disposed above the frontal surface of the adjusting disk (4) accessible from the front.
