Abstract (en)

[origin: EP0185393A1] 1. Process for decontaminating the surface of an object in which a removable layer of a decontaminating and a layer-forming material is produced on the surface and then the layer is removed from the surface with the impurities contained in it, characterised in that firstly only the decontaminating material is applied to the surface and allowed to act and subsequently the layer-forming material is so applied that it absorbs the decontaminating material before its solidification into the removable layer.
