Abstract (en)
[origin: EP0185806A1] Disclosed is an antistatic yarn (13) comprising at least one conductive strand (2) composed of synthetics plastics material, said conductive strand (2) having finely divided electrically conductive material suffused therein to and at least one support strand (6) composed of synthetic plastics material, characterised in that said conductive strand (2) is intermittently solvent bonded (32) along its length to said at least one support strand (6). Also disclosed is a method of making an antistatic yarn (13) which comprises suffusing a finely divided electrically conductive strand (2) with at least one support strand (6) composed of synthetic plastics material to form a coherent yarn (13), characterised by bringing the at least one support strand (6) into generally side-by-side relationship with said conductive strand (2) and intermittently solvent bonding (32) said conductive strand (2) along its length to said at least one support strand (6).
