Abstract (en)
[origin: EP0185874A1] 1. An electrical continuous flow heater for dishwashing machines, washing machines or other electrically operated domestic appliances which involve the production of hot water, wherein a pipe (1) through which flows the liquid to be heated is heated from the outside by at least one tubular heater member (3), characterised by the combination of the following features : a) The pipe (1) through which the liquid flows comprises stainless steel. b) Soldered onto the pipe (1) of stainless steel is a metal pipe of copper, aluminium or a suitable Cu or Al alloy. c) The metal pipe (2) carries a helical tubular heater member soldered thereon.
