Abstract (en)
There is described a racket, particularly tennis or squash racket, in which the mean mesh surface area of the string network is at least equal to 170 mm² for a tennis racket and at least equal to 100 mm² for a squash racket, whereby by mesh the geometrical figure is meant which lies completely enclosed between two pairs of strings crossing one another, such as they are present in a polygon defined by four straight lines which run two by two in parallel relationship with one another, and the lengths of which are equal to half the length of the longest axis in the one direction, and to half the length of the longest axis along a direction which crosses said first direction.
