Abstract (en)
Disclosed herein is a buckle comprising a buckle body (1) and a movable member (15). The movable member (15) is pivotally mounted on the buckle body (1) so that the movable member (15) can be rotated to a working position wherein it is folded on the buckle body. The movable member (15) has an engaging projection (19) which penetrates into an engaging opening (4) formed in the buckle body so that a belt (8) is clamped between the engaging projection and the buckle body when the movable member is in the working position. A locking device (19), (6) is provided on the movable member and the buckle body to hold the movable member in the working position.
