Abstract (en)

A joint structure for bonding a ball and a shaft comprising a ball (1, 11, 33) having a mounting hole (1A, 11A, 33A) bored toward a center thereof; a corrugated surface (1B, 22A, 33B) effective to bond and formed in an inner circumferential surface of the mounting hole; and a shaft (2, 22) fitted into the mounting hole and made of softer material than that of the ball. An outer circumferential portion of the shaft is plastically locally deformed in the vicinity of the corrugated surface of the mounting hole. The two components are bonded to each other with a tightening force.
