Abstract (en)

[origin: EP0187878A1] 1. A heating radiator arrangement with at least one rod (6, 24) which serves to suspend objects, in which the rod (6, 24) is detachably fixed to the radiator (1, 14) with the aid of at least one holder (5, 17), characterised in that the holder (5, 17) has at least one resilient part (9, 19, 20), with which it is snapped into place in an elongate gap (4, 18) of the radiator (1, 14) and lies behind the front face (8, 23) of the radiator (1, 14), which faces the space to be heated, and the rod (6, 24) is fixed on the holder (5, 17) so as to be movable out of an operating position into a position of rest, which said rod is oriented horizontally in the operating position in front of the front face (8, 23) of the radiator (1, 14) and lies behind the front face (8, 23) in the position of rest in the elongate gap (4, 18) of the radiator (1, 14).
