Abstract (en)
[origin: WO8600635A1] A composition and process for removing stains from fabric. The composition comprises a solution of trisodium phosphate, sodium hydroxide, and sodium hypochlorite. The process comprises the steps of (a) contacting stained fabric with a composition comprising an aqueous solution of trisodium phosphate, sodium hydroxide and sodium hypochlorite; (b) allowing the solution to remain in contact with the fabric for a period of time sufficient to substantially completely remove any stain; and (c) rinsing the fabric in water to dilute and substantially remove the trisodium phosphate-containing solution. The composition and process of the invention are highly effective in removing set blood, mucous and perspiration as well as other protein stains from a variety of fabric types without ill effect to the fabric or the hands of the user.
