Abstract (en)

[origin: EP0188738A2] For treating a fluid mixture containing a liquid phase, in order to obtain a significant and fundamental change in properties, all the constituents of the mixture are transformed into a state of high kinetic energy and exposed to intense acceleration, all the constituents of the mixture moving on a three-dimensional, closed, looped track. This state is maintained until quasi-steady conditions have been obtained, and the external action on the mixture is then terminated. <IMAGE>
