Abstract (en)

[origin: EP0188746A2] 1. Device for the injection of fuel into a combustion chamber of an internal-combustion engine, having an injection nozzle which has a nozzle element (10) which is clamped to a nozzle holder (16) by a check nut (14, 102) and having a glow element (26) following the injection nozzle, which glow element has a passage (28) surrounded by heatable structures for the spray jets (30) and the one connection end of which is connected to a contact element (64) insulated to earth, which serves as connection for an external heating current supply, characterized in that the contact element is constructed as a contact ring (64, 106) fastened to the jacket circumference of the check nut (14, 102), preferably coaxially with the injection nozzle.
