Abstract (en)
[origin: EP0189372A1] 1. Watch case provided with attaching members for a wristlet and a lodging (2) to receive in the usual manner a standard watch movement (3) with conventional dial and hands, and comprising a rigid body member (1a, 1b, 1c) having a thickness approximately equal to that of the conventional casings for the given standard watch movement (3), this rigid body member (1a, 1b, 1c) having two end sections (1a, 1b) and an approximately flat intermediate section (1c), in which said lodging (2) is formed, one (1a) of the end sections having a camber intended to match that of the inner side of the wrist, characterized - in that the other end section (1b) has a flat back side (11) and a length at least approximately equal to that of the intermediate section (1c), in order to be able to extend over the most important part of the width of the wrist upper face, - in that the intermediate section (1c) forms an obtuse angle with said other end section (1b) so as to lie on the inner upper wrist edge, - and in that the back side (12) of said one (1a) of said end sections has a flat portion (13) which is perpendicular to the flat back face (11) of said other end section (1b).
