Abstract (en)

The invention relates to an improved sash bolt for the closure of shutters, which comprises a rotatable rod (1) mounted on a shutter leaf and having end hooks (2, 3) and an intermediate operating handle (6) with lateral recesses (14, 15) and a locking device (7) mounted on the opposite leaf and provided with two counterposed portions (17, 18) intended to engage in the recesses (14, 15) of the handle (6), on at least one of the said portions (17, 18) there being mounted a displaceable element (20) which can be superimposed at least in part, over the handle (6) for locking it when the two shutter leaves are adjacent one another in the closure position.
