Abstract (en)  
[origin: US4672694A] A shower partition with one or a plurality of door elements (1), that are supported on an upper rail and which engage with extension pieces (2) or an angled section (3) at the lower end in a recess (4) of a base rail (5) of which the wall section that is proximate to the shower-stall interior is supported, in such a manner as to be moveable on the remaining section of the base rail (5) and is configured, for example, as a rod (9) such that the wall section (rod 9) can be moved from a position that overlaps the angled section (3) or the extension piece (2) of the door element or elements (1) into a position that permits a specific displacement of the door elements (1) transversely to their plane in the direction of the shower-stall interior.
