Abstract (en)  
[origin: US4658725A] A fuse or triggering device for a small bomb arranged in an artillery grenade, which includes a percussion fuse constituted of a striker and a detonator. The above-mentioned artillery grenade contains a plurality of small bombs arranged behind each other, which are ejected at a predetermined point in the trajectory of the artillery grenade. Each small bomb possesses an autonomous fuse. A slider containing the detonator is secured in a safety position, in that the slider lies against an outwardly pivotable securing lever which lies resiliently prestressed against the inner wall of a further small bomb, and in which the striker is fixed in position between the slider and a securing disc which is deformable in response to the firing acceleration of the artillery grenade.
