Abstract (en)
[origin: EP0189812A2] A fastener for a window or door shutter consists of a twistable fastening bar (2) which bears at its ends fastening claws (3) interacting with a respective fastening pin (4) on the casing side, and of a rotating lock for the fastening bar (2) having a locking member actuated by a locking spring (13). In order to be able to combine ease of handling with a high degree of operational reliability, the locking member is designed as a locking latch (5) mounted in a housing (8) fixed to the shutter, with an axis of rotation parallel to the fastening bar (2), the fastening bar (2) possessing a latch notch (6). <IMAGE>
