Abstract (en)

[origin: EP0189813A2] 1. Device for fixing an opened window shutter or door shutter which carries shutter hinges (2) with a hinge sleeve (6) into which a hinge spigot (5) engages, with the hinge spigot (5) being secured by means of a block bar (7) to the window or door case, or in the wall, with a bearing housing (9) for an adjustable latch (10) which has a blocking abutment (11) which cooperates in the opened position of the shutter (1) with a counter abutment (21) belonging to the block bar (7), characterized in that the bearing housing (9) is rotationally fixedly arrangeable at the hinge sleeve (6) of at least one shutter hinge (2) and the counter abutment (21) is formed as a piece (22) adjoining the block bar (7).
