Abstract (en)
[origin: EP0189842A2] 1. A roller blind with two lateral guides (1) for the roller blind lamellae (2), where the longitudinal direction of the guides for the roller blind lamellae occupies an acute angle to the horizontal or a sloping position, and with a roller blind bar (3), preferably weighted, attached to the bottom roller blind lamella, which is led between and in the lateral guides (1), and where in each end region in the shape of the roller blind bar (3) at least one rotatable roller (6) is provided, characterized in that the roller (6) is between sealing strips (7) of the lateral guides (1) and rolls out on that sealing strip which at the time lies underneath it.
